We take great pride in our work and every customer is important to us.

This is a letter I am sending to all of our customers. We are now offering a new maintenance program. How nice will it be to not have to think of your septic system again this program is awesome… We come by once a year and check your system. This takes all the wondering or worry out of how things are going with your septic system we will send you a letter with how your system is doing with our invoice.

The price for this is $50.00 per year and if you have a lift station it is $75.00 you will be billed after the maintenance work is complete. We will have to have easy access to your system <u>no</u> need to prepare or uncover the tank we take care of it all. If your system is hard to get to or if it requires a riser for easier access we will let you know at our first visit.

The work we do offers you comfort in knowing your main pipe from the home to the tank is clear and in good working condition (we will camera the line). The ground freezes then thaws and pipes do move along with roots that often make their way in to the pipes and the tank. We check the sludge in the tank and the mat that forms on the top of the tank. That will vary with each home and when a tank should be cleaned.

We are happy to be able to offer this program to our customer's just call today and we will be more than happy to explain or new program and put you on or list. It's a small price to pay to know your system is working properly and just one more thing you don't have to think about. When you go to sell your home how nice will it be when you are able to show the buyer a maintenance program in place. We keep all information on your septic system along with all repairs.

Respectfully; Lynn Gillespie
